

Analoge TK-Anlage mit CLIP Odyssey

Odyssey ist eine analoge TK Anlage mit 1 externen Line Anschluß und 4 internen Nebenstellen mit der Möglichkeit einer AKTIVEN FAX/MODEM Weiche und **CLIP*** Funktion.

*Clipfunktion (nur bei inaktiver Faxweiche möglich)

Highlights:

- > One external line.
- > Four extensions with pulse or tone dial (might be combined variously).
- > While is failed of power supply the function of first extension is conserved.
- > Its possible to make one external and one internal connection
- > Internal connection is of course free charge.
- > The possibility of monitoring internal as same as external calls is impossible.
- > The different type of ringing for internal, external and even door intercom calling.
- > Ringing from external line is possible to delayed variously
- > Adjustable lenght of FLASH (100 - 600 ms)
- > Transferring of call with waiting for connection
- > Transferring of call with time supervision.
- > Back inquiry-it is possible to make consultation to other extension during connection.
- > The possibility of direct access to external line.
- > Prohibited numbers - restriction of extension to call unrequested numbers
- > Adjustable FAX and MODEM switch - pasive and active
- > Possibility to set features for each extension individually.
- > Reservation of set features in EEPROM memory.
- > The exchange transmit CLIP to extension (number of calling)
- > The speed of modem transmission is unrestricted by exchange.
- > In standard protection against overvoltage in telecommunication network.
